

SEGMENTED BLADES FOLDING MACHINE

With its strong welded steel frame this machine can fold sheets made from different materials such as galvanized steel, aluminum, zinc and stainless steel. Also due to its different sized segmented blades, it could easily fold different sized boxes.

And thanks to its supportive springs, the power needed to make the fold is greatly reduced to be suitable for hand operating.

Power	N/A
Maximum Sheet Width	2000 mm
Maximum Sheet Thickness	Galvanized 1 mm Stainless Steel 0,7 mm Aluminium 1,5 mm Zinc 2 mm
Top Segments Qty/ Dimensions	1 of Each 100 mm Left and Right Corner Piece 1 of Each 30/40/60/70 mm Piece 16 of Middle 100mm piece
Bottom Segments Hieght	60 mm
Dimensions	2500 mm x 750 mm x 1160 mm
Weight	750 kg
